

IndiaFy — Final Production Bug Report

Full Codebase Static Analysis · Customer · Seller · Admin Panels · Generated: 2026-08-29

6

● CRITICAL

9

● HIGH

8

● MEDIUM

5

● LOW

Section 1 — Customer / User Panel

7 issues

C-01 react-toastify silently fails — No `<ToastContainer>` mounted in `App.jsx`

frontend/src/App.jsx

Checkout, order history, cart — 30+ pages पर `toast.success()` / `toast.error()` call होती है लेकिन user को कुछ भी नहीं दिखता क्योंकि `<ToastContainer>` कभी mount ही नहीं है।

Impact: Every user-facing notification is invisible. Silent failures on checkout, login, cart operations.

```
// App.jsx में add करो:
import { ToastContainer } from 'react-toastify';
import 'react-toastify/dist/ReactToastify.css';

// JSX में <BrowserRouter> के अंदर:
<ToastContainer position="top-right" autoClose={3000} />
```

C-02 Hardcoded Seller ID in Checkout — Wrong seller को orders जाएंगे

frontend/src/pages/customer/Checkoutpage.jsx — Line 207

Impact: अगर cart item का `sellerId` missing है तो order एक hardcoded random ObjectId को जाएगा।

```
seller: it.productId?.sellerId || it.sellerId || "67a304e6727284f6760b7410"
// ❌ Production में गलत seller को order जाएगा
```

Fix: Validation add करो कि `sellerId` must exist. Remove the hardcoded fallback ID.

X-01 App.jsx में `toast` undefined — backend offline पर app crash

frontend/src/App.jsx

`toast.error("Backend server is offline...")` call होती है लेकिन `toast` imported नहीं है। Backend offline होते ही frontend crash करेगा।

Fix: `import { toast } from 'react-toastify';` add करो App.jsx में।

C-03 Guest Cart → Login Cart Merge: Silent partial failure

frontend/src/store/cartStore.js – Line 51–67

Cart merge loop में अगर एक item fail हो (out of stock, network error), loop break नहीं होता gracefully। Partial merge होती है और guest cart delete हो जाती है — items permanently lost।

Fix: हर item के लिए individual try-catch। Finally block में refetch।

C-04 Order History: Sporadic empty screen (response shape mismatch)

frontend/src/store/orderStore.js – Line 21

axiosInstance interceptor कभी-कभी double-nested response देता है। `res.data` कभी array होती है, कभी `{data: [...]}` — causing empty order list.

C-05 COD Fee ₹40 लेकिन UI में कोई breakdown label नहीं

frontend/src/pages/customer/Checkoutpage.jsx – Line 91

COD fee total में add होती है लेकिन order summary में show नहीं होती। User को surprise charge दिखता है।

C-07 Debug console.log production में user email और password status expose करता है

backend/controllers/customers/auth.controllers.js – Line 80–96

```
console.log("Login attempt for email:", email);  
console.log("Password verification result:", isMatch ? "MATCH" : "MISMATCH");
```

Security + Privacy violation। Server logs में user credentials visible।

Section 2 — Seller Panel

10 issues

S-01 Seller Model: isApproved default true — Approval System Completely Broken

backend/models/sellers/auth.model.js — Line 71-73

Database schema में `isApproved: { default: true }` है। इसका मतलब — कोई भी नया seller signup करते ही automatically approved हो जाता है। Admin approval flow exist नहीं करता।

```
isApproved: {  
  type: Boolean,  
  default: true // ❌ Should be false — Admin को approve करना चाहिए  
}
```

Fix: `default: false` करो। Admin panel से approve करने पर `true` set हो।

S-03 DashboardGuard: Status check code में है ही नहीं (comment vs implementation)

backend/middlewares/dashboardGuard.middleware.js

Guard के comment में लिखा है कि "only ACTIVE approved nodes allowed" — लेकिन actual code में सिर्फ ownership check है। Pending/Rejected/Suspended seller nodes के sellers भी dashboard access कर सकते हैं।

```
// Add this check in dashboardGuard:  
if (node.status !== "ACTIVE" || !node.isActive) {  
  return res.status(403).json(  
    new ApiError(403, "Your store is awaiting admin approval.")  
  );  
}
```

S-04 Live Orders Page हमेशा Empty — Wrong Status Filter

frontend/src/pages/seller/LiveOrders.jsx — Line 25

Live Orders page filter करती है `o.status === "Accepted"`, लेकिन नए orders backend से `"Pending"` status के साथ आते हैं। इसलिए Live Orders page हमेशा खाली दिखती है।

```
const liveOrders = orders.filter(o => o.status === "Accepted");  
// ❌ नए orders "Pending" या "Processing" में आते हैं  
  
// Fix:  
const liveOrders = orders.filter(o =>  
  ["Pending", "Processing", "Accepted"].includes(o.status)  
);
```

S-06 Packing Video Upload = Order Auto-Shipped (Logic Bug)

backend/controllers/orders/order.controllers.js — Line 715

Seller video upload करते ही order status automatically `"Shipped"` set हो जाता है — चाहे actual physical shipment हुआ हो या न हो।

```
order.status = "Shipped"; // ❌ Video upload ≠ Shipped!  
order.packingVideoUrl = videoUrl;
```

Fix: Video upload को status change से अलग करो। Separate `POST /video` और `PUT /status` endpoints।

S-07 deleteOrder: Seller/Admin को 403 मिलता है (Route vs Controller mismatch)

backend/routers/order/order.route.js — Line 25

Route `roleGuard(["Customer", "Seller", "Admin"])` allow करता है, लेकिन controller में hardcoded customer-only check है — Seller/Admin हमेशा 403 पाएंगे।

S-02 Seller Login JWT: role "seller" (lowercase) — Inconsistency across codebase

backend/controllers/sellers/auth.controllers.js — Line 142

JWT token में `role: "seller"` (lowercase) sign होता है लेकिन response में `tokenData.role = "Seller"` (PascalCase) भेजा जाता है। Frontend store में lowercase save होती है। यह inconsistency future role-check bugs के लिए foundation है।

S-08 Dashboard Revenue "+12.5% vs last month" Hardcoded Fake Value

frontend/src/pages/seller/Dashboard.jsx – Line 278

```
<span>+12.5% vs last month</span> // ❌ Static, not calculated
```

Revenue growth percentage हर seller को same static value दिखाती है। Misleading information।

S-09 Seller Settings: isApproved/status fields protect नहीं हैं

backend/controllers/sellers/auth.controllers.js – Line 366–373

Forbidden fields list में isApproved , status , refreshToken , otp शामिल नहीं हैं। Malicious PATCH request से seller अपना approval status self-approve कर सकता है।

S-10 getAllSellers — सभी sellers की email/info publicly accessible

backend/controllers/sellers/auth.controllers.js – Line 425

Verify करो कि यह route Admin-only protected है। Currently सभी sellers की name, email, businessName expose हो रही है।

Section 3 — Admin Panel

8 issues

A-03 Admin Login: Security Key Optional Bypass — Login without key possible

backend/controllers/admins/auth.controllers.js — Line 92

```
const isKeyMatch = securityKey
  ? (await passwordDecryption(securityKey, securityKeyDetails.key))
  : true; // ❌ Empty key = bypass!
```

Impact: अगर frontend accidentally empty securityKey भेजे, admin login बिना security key verify हुए हो जाता है।

Fix: Security key always mandatory करो: `if (!securityKey) return 400`

A-01 System Health: Razorpay/SMTP/Stripe — सब Hardcoded "Online"

backend/controllers/admins/management.controllers.js — Line 91-96

```
gateways: {
  razorpay: "Online", // ❌ No actual API ping
  stripe: "Online", // ❌ Stripe integration नहीं है!
  smtp: "Connected" // ❌ No SMTP check
}
```

Admin panel "System Health" page हमेशा सब green दिखाता है — Razorpay down होने पर भी "Online" दिखेगा।

A-02 Duplicate adminManagementRoutes Registration in app.js

backend/app.js — Line 193-194

```
app.use("/api/v1/indiafy/admin/management", adminManagementRoutes); // L193
app.use("/api/v1/indiafy/admin", adminManagementRoutes); // L194 ← DUPLICATE!
```

Same router को दो अलग paths पर mount करने से unpredictable route matching और potential double-processing होती है।

A-04 Customer Management: isBlocked हमेशा false (hardcoded)

backend/controllers/admins/management.controllers.js – Line 329

```
isBlocked: false, // ❌ Always false – actual status नहीं
```

Admin customer list में कोई भी customer blocked दिखता ही नहीं। Block/Unblock feature effectively non-functional।

A-05 Admin Dashboard Insights — 100% Hardcoded Fake Data

backend/controllers/admins/management.controllers.js – Line 254-275

Every Admin login पर same fraud alerts, same "3 sellers below 3.5 rating", same revenue opportunities show होती हैं — DB से कोई data नहीं आता। Admin decisions fake data पर based होंगे।

A-06 Revenue Trend Padding: Year ambiguity — Same month name different years

backend/controllers/admins/management.controllers.js – Line 181-192

Trend padding सिर्फ month name ("Jan") से match करती है — अगर data Jan 2025 और Jan 2026 दोनों हों तो गलत pad होगा। Year को comparison में include करो।

A-07 Razorpay Webhook Secret .env में नहीं है — Dev में कोई भी Webhook call करे

backend/controllers/payments/payment.controllers.js – Line 200 | backend/.env

```
const webhookSecret = process.env.Razorpay_Webhook_Secret || "test_secret";
// ❌ .env में define नहीं है – सब कुछ "test_secret" से validate होगा

// Dev में signature check ही skip है:
if (signature !== digest && process.env.NODE_ENV === "production") { ... }
// ❌ Dev में कोई भी fake webhook call कर सकता है!
```

A-08 Admin Signup Response: Sensitive fields may leak via toObject()

backend/controllers/admins/auth.controllers.js – Line 56-57

adminDetails.password = undefined के बाद .toObject() call होती है — Mongoose .toObject() deleted properties include कर सकता है। .select("-password -securityKeyId") use करो।

Section 4 — Backend / Cross-Cutting Issues

5 issues

X-02 Payment: Double Stock Deduction Race Condition

backend/controllers/payments/payment.controllers.js – Line 131 & 235

Both `verifyPayment` और `razorpayWebhook` stock deduct करते हैं। दोनों में `isPaid` idempotency check है — लेकिन simultaneous requests में दोनों `isPaid: false` पाकर double-deduct कर सकते हैं।

```
// Fix: Atomic update use करो
const updated = await OrderModel.findOneAndUpdate(
  { _id: orderId, isPaid: false }, // ← atomic condition
  { $set: { isPaid: true, ... } },
  { new: true }
);
if (!updated) return; // Already processed
```

X-03 Seeder Service: 3 Products में Broken Image URLs

backend/services/seeder.service.js – Line 227, 499, 542

```
"photo-1528659555-528659555-528659555-528659555" // L227 Invalid
"photo-1510440847474-747474747474" // L499 Invalid
"photo-1510440847474-747474747474" // L542 Duplicate+Invalid
```

Seeded products के images 404 return करेंगे।

X-04 Order Controller: Full Request Body production logs में — Privacy Violation

backend/controllers/orders/order.controllers.js – Line 31

```
console.log(`[Checkout Trace] Payload:`, JSON.stringify(req.body));
// Customer address, payment method, item prices – सब server logs में
```

X-05 Hardcoded Razorpay Test Credentials in Source Code

backend/controllers/payments/payment.controllers.js – Line 30-31

```
const activeKeyId = key_id || "rzp_test_Sm5HFLdh2qH4N1";  
const activeSecret = key_secret || "CIXwT8ZWQYU6j19hIqzmgeX1";
```

Git history में credentials expose! Production deploy पर .env missing हो तो test credentials live payments पर use होंगी।

X-06 No Rate Limiting on Auth Routes — Brute-force possible

backend/app.js

Login, Signup, OTP endpoints पर कोई rate limiting नहीं! `express-rate-limit` add करो — 5 requests/min per IP on auth routes।

Panel-wise Flow Status

Customer Panel

Flow	Status	Issue Ref
Signup	✓ Working	—
Login	✓ Working	Debug logs (X-04)
Browse Products	✓ Working	—
Add to Cart (Guest)	✓ Working	—
Guest → Login Cart Merge	⚠ Partial	Silent fail on item error (C-03)
Checkout — COD	✓ Working	Toasts invisible (C-01)
Checkout — Online Pay (Razorpay)	⚠ Partial	Race condition risk (X-02)
Checkout — Test Mode	✓ Working	—
Order History	⚠ Partial	Toast errors invisible (C-01)
Profile / Saved Addresses	✓ Working	—
Password Reset (OTP)	✓ Working	—

Seller Panel

Flow	Status	Issue Ref
Seller Signup	⚠ Broken Logic	Auto-approved on signup (S-01)
Seller Login	✓ Working	—
Store Node Creation	✓ Working	—
Dashboard Stats	⚠ Partial	Revenue % hardcoded (S-08)

Flow	Status	Issue Ref
Live Orders Page	🔴 Broken	Always empty — wrong filter (S-04)
Orders Management	✅ Working	—
Packing Video Upload	🔴 Broken	Auto-ships order on upload (S-06)
Inventory Management	✅ Working	—
Products CRUD	✅ Working	—
Seller Settings	⚠️ Partial	Missing forbidden fields (S-09)
Approval Flow	🔴 Broken	DashboardGuard no-op (S-03)
Notifications	✅ Working	—

👑 Admin Panel

Flow	Status	Issue Ref
Admin Login	⚠️ Partial	Security key bypass risk (A-03)
Admin Signup	✅ Working	—
Dashboard Stats (KPIs)	✅ Working	—
Dashboard Insights	🔴 Broken	Hardcoded fake data (A-05)
Customer Management	⚠️ Partial	isBlocked always false (A-04)
Seller Management / Approvals	✅ Working	—
Order Management	✅ Working	—
Product Management	✅ Working	—
System Health Page	🔴 Broken	All hardcoded "Online" (A-01)
Audit Logs	✅ Working	—
Support Inbox	✅ Working	—

Flow	Status	Issue Ref
Revenue Trend Chart	 Partial	Year ambiguity in padding (A-06)

Production Implementation Priority

🔴 P0 — Go-Live से पहले Must Fix (Total: ~3-4 hours)

#	Fix	File	Effort
1	Add <code><ToastContainer></code> in App.jsx	frontend/src/App.jsx	5 min
2	Fix <code>toast</code> import crash in App.jsx	frontend/src/App.jsx	2 min
3	Seller <code>isApproved</code> default → <code>false</code>	models/sellers/auth.model.js	5 min
4	DashboardGuard: Add node status check	middlewares/dashboardGuard.middleware.js	30 min
5	Payment race condition → atomic <code>findOneAndUpdate</code>	controllers/payments/payment.controllers.js	1 hr
6	Admin security key — mandatory validation	controllers/admins/auth.controllers.js	15 min
7	Add <code>Razorpay_Webhook_Secret</code> to .env	backend/.env	5 min
8	Remove hardcoded sellerId in Checkout	pages/customer/Checkoutpage.jsx	15 min
9	Fix Seller settings: Add <code>isApproved/status</code> to forbidden list	controllers/sellers/auth.controllers.js	5 min

🟡 P1 — 1 Week के अंदर Fix करो

#	Fix	Effort
10	Live Orders filter — add Pending/Processing status	20 min
11	Remove duplicate <code>adminManagementRoutes</code> in app.js	10 min
12	<code>deleteOrder</code> : Fix Seller/Admin role check in controller	1 hr
13	Separate packing video upload from order status change	2 hrs

#	Fix	Effort
14	Fix broken seeder image URLs (3 products)	30 min
15	Remove production console.log from controllers	1 hr
16	Customer isBlocked — read from DB, not hardcoded false	2 hrs

🟡 P2 — 1 Month के अंदर

#	Fix	Effort
17	Rate limiting on auth routes (express-rate-limit)	1 hr
18	Real System Health checks (Razorpay API ping etc.)	4 hrs
19	Real Admin Insights from actual DB analytics	8 hrs
20	Revenue trend: Fix year ambiguity in month padding	1 hr
21	COD fee breakdown visible in checkout UI	1 hr
22	Move Razorpay hardcoded keys to secrets manager	2 hrs
23	Guest → Login cart merge: individual item error handling	2 hrs

Security Checklist for Production

- ☐ सभी `console.log` जो user data (email, body) log करें — remove करो
- ☐ `Razorpay_Webhook_Secret` `.env` में add करो और development में भी validate करो
- ☐ Seller `isApproved: default: false` — Admin approval enforce करो
- ☐ Admin security key — empty string check mandatory
- ☐ `express-rate-limit` : `/auth/login`, `/auth/signup`, `/auth/otp` पर 5 req/min per IP
- ☐ Hardcoded Razorpay test credentials source code से हटाओ — `.env` only
- ☐ Webhook signature validation — development में भी enforce करो
- ☐ Production deploy में `NODE_ENV=production` explicitly set करो
- ☐ `getAllSellers` endpoint — Admin-only guard verify करो
- ☐ Seller settings PATCH — `isApproved/status/refreshToken/otp` को forbidden list में add करो
