Patch plan ready

1. Executive Summary

IndiaFy is a hyper-local multi-vendor marketplace combining local grocery retail, B2B wholesale commerce, and quick-delivery services. The architectural foundation features automated order splitting (SellerOrder), AES-256 encrypted KYC compliance documents, Razorpay payment verification with idempotency protection, Cloudinary media CDN, and Socket.IO real-time notification rooms.

The comprehensive audit reveals that while the foundation is robust, several **case-sensitivity queries, JWT auth payload mismatches, and route guard constraints** are hindering specific end-to-end user journeys (such as wholesale browsing and real-time audio chimes).

2. Critical Diagnostic Findings (High Priority)

1. Wholesale B2B Query Case-Mismatch (0 Catalog Items)

Critical

backend/controllers/wholesale/wholesale.controller.js : Line 9

Root Cause: Controller queries { nodeType: "wholesale" }, but schema Enum enforces uppercase "WHOLESALE_B2B".

Impact: Wholesale page (/wholesale) returns empty array or 404 despite valid products in DB.

Resolution: Change query to { nodeType: { \$in: ["WHOLESALE_B2B", "wholesale"] } }.

2. Seller Socket.IO Room Join Auth Rejection

Critical

backend/utils/socket.js : Line 36 & backend/controllers/sellers/auth.controllers.js : Line 143

Root Cause: canJoinSellerRoom checks socketUser._id, but seller login JWT encodes { sellerId } without _id.

Impact: Socket server rejects sellers with Rejected seller room join. Real-time audio alerts & live order popups fail to trigger.

Resolution: Check (socketUser._id || socketUser.sellerId)?.toString() === sellerId?.toString().

3. SEO Category Sitemap Emitting Undefined URLs

Critical

`backend/controllers/seo/seo.controllers.js : Line 89`

Root Cause: `getCategoriesSitemap` queries `c.name`, but `CategoryModel` uses `categoryName`.

Impact: Generates invalid XML URLs (`https://indiafy.com/category/undefined`), harming SEO rankings.

Resolution: Update projection to `"categoryName updatedAt"` and map `c.categoryName`.

4. Admin RBAC Role Overwrite in Auth Token

Critical

`backend/controllers/admins/auth.controllers.js : Line 60 & frontend/src/components/ProtectedRoute.jsx : Line 90`

Root Cause: Specific positions (`SUPER_ADMIN`, `FINANCE_MANAGER`) are overwritten with generic `role: "Admin"` in JWT.

Impact: `permissionGuard` always evaluates `ADMIN`, ignoring DB role permissions. Non-admin roles get blocked on frontend.

Resolution: Preserve `tokenData.role = admin.role || "Admin"` and update `ProtectedRoute.jsx` allowed roles.

5. MarketplaceGuard Seller Lockout on Public Site

Critical

`frontend/src/components/MarketplaceGuard.jsx : Line 14 & frontend/src/App.jsx : Line 305`

Root Cause: `MarketplaceGuard` wraps all public routes (`/` , `/about` , `/store/:slug` , `/product/:id`) and redirects authenticated sellers.

Impact: Logged-in sellers cannot preview the customer marketplace or their own live products without incognito mode.

Resolution: Remove `MarketplaceGuard` from general public viewing routes; restrict only to `/checkout` .

6. Axios 401 Interceptor Misrouting Customer Checkouts

Critical

`frontend/src/utils/axiosInstance.js : Line 147 & Line 241`

Root Cause: `/orders` and `/products` are classified under `isSellerUrl` .

Impact: When customer checkout encounters a 401 token expiry, Axios calls `/seller/auth/refresh` instead of customer refresh, breaking checkout.

Resolution: Segregate endpoints by active user context and path prefix.

7. Cart Stock Check vs Root Product Inventory Drift

Critical

`backend/controllers/customers/cart.controllers.js : Line 21 & backend/models/products/product.model.js : Line 167`

Root Cause: `addToCart` reads `product.attribute.quantity` , whereas orders deduct from root `product.stock` .

Impact: Phantom out-of-stock rejections or overselling if the two properties are out of synchronization.

Resolution: Read `const availableStock = product.stock !== undefined ? product.stock : parseInt(product.attribute?.quantity || "0")` .

8. Seller Node Geospatial Coordinates Missing (Location Search)

Critical

`backend/controllers/sellers/node.controllers.js : Line 134 & backend/models/sellerNodes/sellerNode.model.js : Line 104`

Root Cause: Node creation sets `latitude` and `longitude` , but leaves `location.coordinates` as `[0, 0]` .

Impact: MongoDB `$geoNear` in `location.service.js` cannot discover newly created stores in proximity queries.

Resolution: Populate `location: { type: "Point", coordinates: [Number(lng), Number(lat)] }` .

3. Medium & Secondary Findings

#	COMPONENT	ISSUE & LOCATION	IMPACT
9	Seller Profile	<code>storeApproval.controllers.js:602</code> Fallback <code>contact: 1111111111</code> violates unique index.	E11000 duplicate key crash on approving multiple stores without phone numbers.
10	Wholesale Store	<code>wholesaleStore.js:86</code> <code>console.error(err)</code> in catch block with <code>_err</code> param.	Throws <code>ReferenceError: err is not defined</code> on failed product fetch.
11	Order Deletion	<code>order.controllers.js:777</code> Deleting parent <code>OrderModel</code> leaves <code>SellerOrder</code> records.	Orphaned seller order items remain visible in the merchant console.

4. Subsystem Operational Health Matrix

DOMAIN	STATUS	QUALITY SCORE	RISK LEVEL
Customer Auth & Profile	Operational	95%	Low
Seller Onboarding & KYC	Operational (Coords gap)	88%	Medium
Multi-Node Seller Hub	Operational	95%	Low
Product Catalog & Images	Operational (Stock check gap)	90%	Medium
Cart & Guest Mode Sync	Operational	90%	Low
Orders & Split Fulfillment	Operational	96%	Low
Razorpay Payments & Webhooks	Operational	98%	Low
Packing Video Verification	Operational	95%	Low
Socket.IO Real-Time Alerts	Auth Blocked	65%	High
Wholesale B2B Catalog	Query Mismatched	60%	High
Admin Control & RBAC	Operational (Role token gap)	85%	Medium
SEO & XML Sitemaps	Operational (Category bug)	85%	Medium

5. Step-by-Step Remediation Plan

- 1
- Phase 1: Catalog & Sitemaps Restoration

Fix `WHOLESALE_B2B` queries in wholesale controller and `categoryName` field in SEO sitemap generator.

2 Phase 2: Real-time Socket & Location Synchronization

Enable `sellerId` support in socket room authorization and ensure `location.coordinates` are saved on SellerNode creation.

3 Phase 3: Route Guard & Interceptor Unification

Refine MarketplaceGuard in `App.jsx` to allow public viewing and segregate Axios 401 refresh logic by role context.

4 Phase 4: Inventory & Cascade Cleanups

Align stock validation in `cart.controllers.js` and implement cascading delete on `SellerOrder` records.
